

JPMorgan Chase: Digital Banking

The background of the slide is a dark blue field filled with various financial data visualizations. These include multiple overlapping line graphs in shades of blue and orange, a candlestick chart, and a bar chart. Faint, out-of-focus numbers like '2.97', '1.38', and '3.53' are scattered across the background, suggesting a high-tech financial environment.

STRATEGIC RESPONSE TO
FINTECH DISRUPTION

Fintechs are no longer just payment apps — they are becoming full banking alternatives

- Revolut: 52.5 million users, \$4B revenue in 2024
- Gen Z and Millennials have the highest bank-switching risk of any generation, despite high satisfaction (*Deloitte, 2026*)
- Nearly 70% of Gen Z and Millennials have already authorised data sharing with third-party financial providers (*Deloitte, 2026*)

JPMorgan has the name, but not the tech

- JPMorgan's brand and capital are its armour but its culture is too slow for the fintech battlefield
- The threat isn't existential, it's generational JPMorgan is at risk of losing its next decade of customers, not its current ones
- The window to act is now — younger customers are already open to switching, and fintechs are closing the trust gap fast

JPmorgan will not be killed, but may bleed slowly

Competitive Rivalry — Moderate/High: JPMorgan wins on brand, fintechs win on speed

Threat of New Entrants — Moderate: Low barriers to launch, but regulation protects core banking

Threat of Substitutes — Moderate/Growing: Fintechs carving out payments, savings, investing

Supplier Power — Low: Only relevant if tech is outsourced

Buyer Power — High: Negligible switching costs, spoiled for choice and Deloitte finds Gen Z and Millennials are the most likely generation to switch banks, and a single moment of friction is enough to trigger it

Jpmorgan already tried to combat this threat

BUILD

- Finn (Jpmorgan's failed attempt at fintech) cost \$50-100M and failed within a year
- Internal culture not suited to agile development

BUY

- Instant access to proven technology and talent
- Acquired user base becomes JPMorgan customers
- JPMorgan has capital to absorb the cost

PARTNER

- Zelle proves this model works
- Lower risk, faster to execute
- Limitation: co-owned with rival banks

Jpmorgan have
the name and
capital to succeed:
this is what they
should do

- JPMorgan should acquire an established fintech challenger while expanding its partnership strategy (Zelle) to cover the full ecosystem threat
- Acquire a challenger like Chime to close the technology gap immediately
- Expand or form new partnerships to cover savings, investing and international transfers
- Build alone is off the table — Finn proved JPMorgan cannot execute this internally
